

Eörs Szathmáry (born 1959) is a Hungarian theoretical evolutionary biologist, widely known for his foundational work together with the late John Maynard Smith on the major evolutionary transitions. He has worked on the origin of life, systems chemistry, replicator theory, the origin of the genetic code, the emergence of the eukaryotic cell, the origin of natural language, and the relationship between learning and evolution. He is the director of the Center for the Conceptual Foundations of Science at the Parmenides Foundation, Pöcking, Germany. He is a professor of biology at Eötvös University in Budapest and a research professor at the Institute of Evolution of the Centre for Ecological Research.

Professor Szathmáry has recently published a seminal paper in PNAS on the prospects and threats of evolvable AI: <https://doi.org/10.1073/pnas.2527700123>.
